

If you are planning in purchasing a LED TV with an exceptional image features and a spectacular experience in your home, now the dream of a perfect picture quality is a reality, thanks to the new line of Samsung LED TVs. In This [LED TV reviews](#) , Samsung has taken it to the next level with this new kind of HDTV technology. All Samsung LED TV models have 4 HDMI inputs and 1080p pixel resolution.

What makes the Samsung LED TVs so special?

The new line of LED TVs offers brilliant developments in the 3 most important features in any TV (design, picture quality and eco friendly).

1) Samsung LED TV Design:

Samsungs most exceedingly developed HDTV technology is enclosed in a razor-thin shape outline. Samsungs LED TVs are only 1.2 inch deep which is measured to be the thinnest TV so far. This terrific design makes it easy for anyone to hang their TV on the wall.

2) Picture Quality:

Samsungs LED TVs offer great color and crisp picture due to the new LED back lighting system. You don't have to experience motion blur anymore because these new LED TVs have an Auto Motion Plus feature which gives soft motion images. Unlike KCD TVs, LED TVs offer deep black levels, accurate colors and better shadow details.

3) Environment Friendly:

Another important feature that makes the new line of Samsungs LED TVs so exceptional is the amount of power they save. Because of the new LED backlight technology, these new TVs use 40% less power than LCD TVs. Samsung made sure that these TVs are eco-friendly and they achieved that by reducing unsafe materials such as mercury and lead. These TVs require less packaging materials and well-organized transportation due to the ultra slim design.
